DigiPen Institute of Technology

CS 372/596: Machine Learning Project Proposal

Proposal Format

Your proposal submission (includes Midway presentation and reflection video) will be submitted on Moodle by the deadline. You should describe the problem you are trying to solve, your approach, the algorithms, etc.

The project proposal is worth 10% of your project grade, which will be split amongst two deliverables:

- Reflection Video (5%)
- Midway Presentation (5%)

Your proposal will be evaluated by these criteria:

- Clear project Idea, significant scientific question, and brief description of the project.
- The quality of proposal presentation.
- Being able to answer questions about the project.
- Good understanding of the problem.
- Good explanation of the project.
- Visualization (if any).
- Good writing (in slides).
- Good reflection video.

The content of the reflection video:

You are required to create a reflection video discussing the content and key takeaways from one of the presentations you observed in the class. This is not an evaluation but an opportunity to understand the content better and contribute to the overall learning experience.

Submission Details:

- Please submit your reflection video through MS Teams.
- Each video should be no longer than 5 minutes.
- Focus on key points and insights from the presentations rather than critiquing or evaluating them.

The structure of Midway presentation:

- Check Proposal Presentation guidelines on Moodle.
