CS 211 Introduction to Database (Fall 24)

Homework 1: Comprehensive SQL Queries
Due Date: Sep. 30th, 2024

Purpose

For this project, you will use what you've learned from lecture 2 to conduct couple simple or complicated searches on top of some tables and filter out the results that are desired. This is a comprehensive hands-on assignment that help you to check how well you've understood the SQL queries, and whether you can correctly use them to fulfill the search requirements.

Knowledge

This assignment should use the most commonly SQL keywords and tricks that you've learned from lectures, including but not strictly limited to INSERT that will insert data into tables, UPDATE that will update existing data, SELECT-FROM-WHERE clauses, cross tables search with various of JOIN or HAVING, result filtering and refine like ORDER BY and GROUP.

Scenario

You are now an owner of a bookstore full of rare books. Now it's the end of Q3, and you want to conduct a statistic on the book sales situation.

Part I (0 points): Tables Creation

Run the script **Create_Rare_Books.sql** and create the original data you need for the rest of your assignment. You will get 0 from this part since you should just copy paste everything from the script to your workbench and run it. And of course I assume you've already setup your workbench correctly.

Part II (100 points, 10 points each): SQL Queries

Now go to **Assignment_1.sql**. Follow all the instructions for each question and fill in the appropriate SQL queries. Put your answer to each exercise after the exercise description.

Submission

When you are done, submit your .sql file to Moodle, using your name as part of the filename (i.e., **Assignment2_John_Smith.sql**).
