MILESTONE: Final
TEAM NAME: Team Gathering
GAME NAME: Forest of the Food
NAME: Minjae Kyung
JOBS: Technical Director
DEGREE PROGRAM: RTIS
GAME DESCRIPTION: The forest of food is player finds,steals and collects ingredient of foods and makes favorite seasonal food. And player should satisfy fairy of the forest to escape the forest of food.

Work Done

We are focused on polishing codes rather than adding new features. Most work is fixing bugs and adjust constant values like hotspot coordination.

I made Interpolations

```
struct BezierInterpolation
{
    Vector2D<>* track;

protected:
    Vector2D<> P1;// (start,0)
    Vector2D<> P2;// (start, startBezier)
    Vector2D<> P3;// (end,0)
    Vector2D<> P4;// (end, endBezier)

    double durationTime; // Interplortation duration time;
    double nowTime; // now progression time

    bool isDead;

public:
    BezierInterpolation();
    BezierInterpolation(Vector2D<>* track, Vector2D<> P1, Vector2D<> P2, Vector2D<> P3, Vector2D<> P4, double duration);

    Vector2D<> GetNowPosition(double progress);
    double GetRemainTime() { return durationTime - nowTime; }
    virtual void Update(double dt);
    bool IsDead(void) { return isDead; }

    friend class interpolationManager;
};
```

This is Bezier interpolation class that can use in spatial interpolation. I set to four points bezier interpolation because it is really familiar due to many programs like Adobe Photoshop.

```
class TimeInterpolation : public BezierInterpolation
{
    double* track;

    double lastT;

    double FindPosition(double time);

public:
    TimeInterpolation(double* track, double start, double end, double duration, double startBezierStrength = 0, double endBezierStrength = 2);
    //beziers must between -1 ~ 1 (if endBezier == 2, same as startBezier)
    //if bezier strength is out of range, it will do undefined thing

    void Update(double dt) override;
};
```

and this is Time interpolation class that can use in time interpolation. it automatically set the four points by start, end, start bezier strength, end bezier strength values. bezier strength

means how smooth start/end phase. close to 1 means start / end slow, and close to -1 means start / end fast.

And end of final polishing, I mostly focused on making trailer videos.

10 second video (BGM included version)
https://drive.google.com/file/d/1RNiZlDeiHTP4otKp-kvNjPmLFc8kivUd/view?usp=sharing
I submitted BGM muted version because of guideline but I think BGM included version is much better.

3 minute video
https://drive.google.com/file/d/1su_p1BDQX5Sp0irDzhmVYo66BbdaQKwC/view?usp=sharing
